

Facility Information Legend

Column Heading	Definition
Facility Identifier	A number which serves as a physical address to identify a facility. At the NTS, it consists of the area plus the address number. If this information is unavailable, the area and asset identifier is used.
Year Built	The year in which in the facility was constructed.
GSQFT	Gross Square Footage
User	The responsible customer of the facility.
Department	Accounting organization.
Asset Identifier	A unique tracking number assigned to each DOE/NSO-owned asset (for tracking purposes).
Function	The main purpose of the facility.
Mission Category	Priority system established to determine which facilities would be assessed first. Mission Category: Mission Critical (MC), Non Mission Dependant (NMD), Mission Dependant Non Critical (MDNC)
Risk Level	A priority tool that ranks a facility to its level of risk to the mission/program
FIMS Deferred Maintenance	The official cost associated with the deficiencies of that facility found during the assessments as reported from the Condition Assessment Information System (CAIS) database, Summary Condition Report
CAIS Condition	The summary condition status generated from CAIS
Date of CAS Inspection	Date CAS evaluators visited the facility.
FIS Rating	The status based on the results of the suitability survey completed by the Functional Manager/SME.
Date of FIS	Date Infrastructure personnel conducted site visit.
Description	The name used to identify a facility. It is not the official name, but defines the occupants or the function that the asset serves.
Program Requirements	Current requirements and its importance to the mission.
Scheduled Projects	Projects scheduled on the Comprehensive Project List.
Potential Assessment Issues	Issues and Concerns in the beginning development state that will enter the Investment Decision Program. This program takes the assessment issues found during the assessment process and determine if they should be addressed as a work order or proceed to a potential project.
Deferred Maintenance (DM)	Identifies the amount of the deferred maintenance dollars that will be reduced based on the completion of the project identified
Total Estimated Cost (TEC)	The total estimated cost of the project identified.
Matrix Prioritization (MP)	A matrix model which uses a risk level and impact probability rating to determine project priority. (A) Immediately (B) Within a Year (C) As Soon as Possible (D) Further Evaluation (E) Run to Fail (F) Disposal on Failure
Impact Probability (#)	A prioritization tool that ranks the project according to the probability of having program impact. (1= High, 2= Medium and 3= Low ; refer to # in parenthesis in the "Potential Assessment Issues" Section)
Site and Infrastructure Planning Recommendation/Comments	Recommendations and the disposition of the facility/infrastructure element. Also contains Fire Inspection and ES&H information, if available.
Facility Manager Comments	Additional comments from the Facility Manager
